**What is Colloidal Silver?**

Colloidal silver is a solution in which microscopic, electrically charged particles of silver are in suspension in water. The silver particles are as small as 1/7,000th the size of a red blood cell and when it is suspended in water, the particles neither sink to the bottom nor float to the top. The particles being all “positively charged” will repel each other.

Colloidal silver is known to kill 650 different kinds of one-celled pathogens, such as bacteria, fungus, viruses, streptococcus and many others, by inhibiting the enzyme which allows their oxygen metabolism. And apparently, it does so in minutes, safely, with no side effect. Then it is cleared out of the body by the immune, lymphatic and elimination systems.

**Colloidal Silver vs Antibiotics and Vaccines**

Colloidal silver is effective against any type of infectious germs, being one-celled organisms, while antibiotics and vaccines are only effective against bacteria and viruses. The DNA of every known pathogen has a strain that is resistant to at least one antibiotic available in the market while for the case of colloidal silver, the microorganisms can't mutate to resist its activity.

All antibiotics create unnatural antibodies inside the human system; the body has to get rid of them. If it doesn't, they disrupt normal functions, consume vast amounts of blood nutrients and destroy tissue. Also some vaccines contain mercury that is known to cause autism in children and can have other negative effect on the brain.

**How we produce our Colloidal Silver**

Our colloidal silver is made with ultra-pure 99.99% silver (.9999 fine) and distilled water. No other chemicals or substances are added. We produce it by means of “Timed Inverted Current Electrolysis” and both the voltage along with current are precisely regulated. This method that we have developed has shown to be more capable in producing the smallest particle of silver.

We use a two stages filtration process to insure the purest and finest colloidal silver possible. First stage consists of filtering the raw solution with a natural unbleached bamboo fiber filter to remove any of the larger particles. Then it is pressure filtered through a submicron filter to ensure that only the smallest of the particles will be present in the solution.

All of our colloidal silver products are stored in amber glass bottles and are sealed with a tamper proof shrink band for your protection.

Our colloidal silver products are available in concentration of 15 ppm (red bottles) and gel format for topical use at 15 ppm (green bottles).

\* ppm = Parts per million

## How to use our Colloidal Silver...

**DOSAGE:** Take the colloidal silver orally by placing the recommended dose under your tongue for at least 30 seconds, then swallow. Take daily:

- as a preventive measure to keep good health and strong immune system.
- to help the body get rid of pathogens or toxins.
- in order to help your body fight viral infections, bacteria and fungi.
- to stop a cold or flu abruptly if taken at the first signs of symptoms.

Double or triple the dosage amount for up to 30 days in order to treat acute or severe illness.

### RECOMMENDATIONS FOR EYE INFECTIONS

Spray once or twice in the affected eye. Will not sting.

### RECOMMENDATIONS FOR EAR INFECTIONS

Apply a few drops of colloidal silver inside the affected ear for fast relief.

### RECOMMENDATIONS FOR TOOTHACHES AND MOUTH SORES

Gargling with colloidal silver is recommended for the prevention of bad breath and tooth decay and as a treatment for mouth ulcers and toothache.

### RECOMMENDATIONS FOR SORE OR STREP THROAT

Spray 2 or 3 times inside the mouth while breathing in.

### RECOMMENDATIONS FOR PNEUMONIA & BRONCHITIS

The best way to knock out pneumonia or bronchitis fast is to breathe in colloidal silver into the lungs. The easiest way to accomplish this is to use a nebulizer which is a device that takes a liquid and atomizes it so that you can breathe it into the lungs. Usually, you only need to use a teaspoon of colloidal silver about 3 times a day - 10 to 15 minutes each time. Many times just for a day or two to clear it up.

### RECOMMENDATIONS FOR SKIN PROBLEMS

Apply directly to opened wounds and other wounds to eliminate surface infections. Contrary to other antiseptics, colloidal silver does not sting or burn. It kills the topical germs in less than six minutes, without harming any surrounding tissues.

**Acne:** Wash and rinse the face thoroughly four times a day; and after each rinsing, use a small amount of Colloidal Silver and massage it onto the problem areas two to three times with a finger or a tiny piece of cotton or tissue. This wash-rinse-massage activity may be continued throughout an acne breakout, or better, as a continuous prevention through the teen years. This continuous habit precludes breakouts, leaving the skin continuously clear.

**Cuts and abrasions:** Apply Colloidal Silver directly to the open wound and onto any dressing used. Colloidal Silver may be used as the only medication on the dressing, or it may be used with another medication.

**Eczema and skin rash:** Dab Colloidal Silver directly onto affected area, rubbing slightly. Repeat often to keep the area moist. Bandage lightly, if desired, keeping the bandage moist with Colloidal Silver. Change bandage daily.

**Warts:** Cover the wart with a small adhesive bandage saturated with a few drops of Colloidal Silver. Keep the bandage moist. The wart should disappear within a few days. Large warts may take a few days longer to disappear.

**Burns:** For minor burns, colloidal silver may be applied topically after the burn is cleaned with soap and cold water and gently dried. To avoid the risk of infection, topical application of colloidal silver should be made to blistered or open burn wounds.

For severe burns, soak a bandage pad with colloidal silver and apply to the burn. Try to maintain the bandage pad moist with colloidal silver and change bandage daily until healing is obvious.

The colloidal silver will speed wound healing and reduce the amount of scarring.

**Sunburns:** Spray colloidal silver on sunburns. It will help reduce the pain and prevent the skin from peeling. Colloidal silver also helps the sunburn turn into a nice tan.

### RECOMMENDATIONS FOR PURIFYING FOOD & WATER

**Water purification:** Colloidal Silver is an excellent water purifier. Water stored with one or two tablespoons of Colloidal Silver per 5 litres will be safe and sweet tasting for a very long time. Water containing germ contaminants (not toxic chemicals) can be made drinkable by adding two to three tablespoons of Colloidal Silver per every 5 litres of water. The Silver whilst purifying the water is also beneficial to the body, unlike the commercial tablets containing toxic chlorine bleach!

**Questionable refrigeration:** In addition to keeping prepared foods cool and well sealed, add about one table spoon of Colloidal Silver per 1 liter (volume) to picnic foods containing mayonnaise, dairy products, or anything that has a potential for Salmonella growth and poisoning. Stir in very well.

**Leftovers and Condiments:** Mix about one quarter tablespoon of Colloidal Silver into each container of mustard, ketchup or pickle relish. Mix one half teaspoon into items that spoil more easily, i.e. mayonnaise, milk etc. They will store longer, remain fresher and benefit digestion.

### KNOWN VETERINARY USES OF COLLOIDAL SILVER

The following conditions in animals, birds and fish have been successfully treated with Colloidal Silver:

- Bacteria and parasites in house pets, farm animals and birds.
- Parvovirus in dogs.
- Revival of belly-up goldfish.
- Scours and undulant fever in cattle.

### OTHER USES FOR COLLOIDAL SILVER

- Can be added when canning, preserving or bottling.
- Add to juices and milk to prevent spoiling, fermenting, deterioration, clabbering or curdling.
- Safely sterilize anything from toothbrushes, dentures, hair brushes to surgical instruments.
- Mist kitchen sponges, towels and cutting boards to eliminate E. Coli and salmonella bacteria to prevent food poisoning and gastrointestinal inflammation.
- Spray on garbage to prevent decay odors.
- Add to fountains, humidifiers and re-circulation cooling towers water to prevent any bacterial growth.
- Mix in postage stamp, envelope and tape moistening wells to prevent bacterial growth.
- Spray inside shoes and between toes to stop most skin itch, athlete's foot and fungi.
- Can be diluted with distilled water and used for colon irrigation, nasal spray and dental water pic solutions.
- Excellent for diapers and diaper rash.
- Diminish dandruff, psoriasis, skin rashes, etc.
- Spray pet bedding and let dry.
- Mix a little in pet water, birdbath and cut flower vases.
- Spray air conditioner filters after cleaning.
- Spray plant foliage to stop fungi, molds, rot and most plant diseases. Silver is an excellent plant-growth stimulator.

There are literally thousands of other essential uses for this nearly tasteless, odorless, benign, powerful and safe disinfectant and healing agent.

**Healing crisis:** This is a condition wherein the Colloidal Silver is killing the pathogens very rapidly. The body's five eliminatory systems, the kidney, liver, skin, bowel and lungs become temporarily overloaded. This especially is true in the case of overcoming AIDS with Colloidal Silver. One may feel as though he or she has the flu. It is recommended to continue the silver regimen, yet drink up to 4 liters of water a day, take five or six grams of vitamin C and a high enema. Repeat for two or three days. Please note if the healing crisis persists see your local practitioner for additional advise.
